

Subject index

- actin, pollen activation 121–128, 187–194
agglutinin activity, quantification 79
Agrobacterium 147–150
Alternaria 116–120
amyloplasts, behaviour in pollen tube tip 190–193
anther development, *Oenothera* 41–53
apertural sporophytic proteins 18–22
apical zonation, pollen tubes 187–194
Arabidopsis 244–255
asexual spheroids 1, 5
Asparagus 23–30, 50, 236–242
autolysin 3
- basidiospore production, control 103–107
bioassay, criteria 208
bioassays, incompatibility 207–211
Brassica 116–119, 208–210, 263–275
- calcium concentration, synergids 98–101
Capsella 170–177, 228–234
capsule retention 17
cDNA clones, *Nicotiana* 88–96
cell-wall bound proteins 210
– lysin 1–6
chemotropism, fertilization 98–101
Chlamydomonas 5, 77–86
cladophylls 23–30
colpal infolding 21
complementation, nutritional 31–34
Coprinus 103–107
cross-pollination 9–17
Crotalaria 225–227
Cucumis 152–159
cytochalasin D 121–129
cytoplasmic male sterility (cms) 263–275
cytoskeleton 244–255
– apical zone pollen tube 187–194
- DAPI labelling 219–223
Dendrobium 61–69
dioecy 23–30, 179–185
double pollination 210
- ear initials, regulation, maize 109–114
egg apparatus 219–223
embryo, in vitro culture 152–159, 257–261
environmental stress response, pine pollen 195–199
Epilobium 187–194
- filiformous apparatus 220
flagellar agglutinins 77–86
– membranes, isolation 78
– proteins 81–82, 84
flow pathways, pollen tube tips 188–190
flower polypeptides 23–30
- G-lysin 1, 5
Gasteria 219–224
genetic load 211
germination inhibitor, pollen 208
granulocrine secretion 61–68
grouping effects, pollen grains 210
- haploids, androgenic 179–185
heat-shock response, germinating pollen 195–199
heterokaryons 31–34
- hemagglutination, pollen extracts 35–40
homokaryons 105–107
hormones, sex differentiation 236–242
hybridization, interspecific 7–17, 139–145
- in situ hybridization 170–177
in vitro fertilization, maize 160–168
– pollen selection, phytotoxic compounds 116–120
incompatibility 7–17, 18–22, 54–60, 88–96, 130–138, 207–211
– bioassays 207–211
incongruity 7–17, 139–145
- Juglans* 139–146
- karyogamy 70–75
- leader peptide sequences, S-proteins 135–138
lectins, pollen 35, 40
Linum 18–22
localization, RNA in megasporocytes 170–177
lysin 1–6
- male lysin, *Volvox* 3
– sterility 41–53, 263–275
mating receptor complex, model 85
megasporogenesis, *Capsella* 170–177
Melandrium 179–185
membrane anchor 77–86
microfilaments, pollen 121–128
microinjection, pollen grain 160–168
microsporogenesis, *Brassica* 264–275
microtubule organization 213–217, 244–255
mitotic activity, stamen 110, 113
Mucor 31–34
- normed variability index 92–93
Nicotiana 88–96, 130–138, 147–150, 208, 209, 211
- Oenothera* 41–53
orchid stigma 61–69
organelle movement, pollen tubes 187–194
ovarial polypeptides 27
- Papaver* 209
Parthenium 210
Petunia 130–138, 208, 209, 211, 257–261
pin/thrum pollen 21
Pinus 195–199
pistil length, *Rhododendron* 7–17
– proteins 54–60, 88–96, 130–139
pollen development, enzyme expression 202–204
– germination 228–234
– grains, electroporated 147–150
– ontogenesis, *Oenothera* 43–52
– prints 20, 21
– selection, phytotoxins 116–120
– size, *Rhododendron* 7–17
– storage 225–227
– tube growth rate 7–17
– vigour 225–227
pollen-style interactions 200–205
pollen-wall proteins 18–22, 139–145
- structure, *Juglans* 140–142
population effects, pollen grains 210
Primula 209
progamic phase 208
Prunus 209
Pyrus, pollen germination 121–128
- Ranunculus* 210
recognition reaction 208
rejection reaction 208
Rhodamine-phalloidine fluorescence pattern, germination pollen 123–127
Rhododendron 7–17
- S-alleles 208
S-allele-associated proteins 54–60, 88–96, 130–139, 208, 209–211
S-gene expression 209
S-lysin 5
selectivity, bioassays, incompatibility 207
self-incompatibility 207–211
self-pollination 9–17
self-sterility 210
seed set after self-pollination, pollen-tube penetration 11, 16
sex chromosomes 179–185
sex differentiation 2–30, 179–185, 236–242
silks, *Zea mays*, gene expression 200–205
Solanum 54–60
species-specific inhibitory effects, pollen 210
sperm lysin 1–6
– nuclei, release 71
sporogenesis, gene control 101–107, 200–205
sporophores, sporeless 103
sporophytic proteins 17–22
stamen growth, at high temperature 268, 271
stigma eluates 210
– print 208
– surface 208
stigmatic cuticle 208
– exudate 67
style grafting 210
sugar specificity, hemagglutination pollen extracts 39
- tapetal material 21
temperature, pollen tube growth rate 9–10
thermotolerance, germinating pollen 198
tip growth mechanisms, pollen tubes 187–194
toxin extracts 117
Tradescantia 217
transmitting tissue 208
trinucleate pollen 228–234
Triticum 70–75, 98–101, 207
tube retarder effect 210
- Volvox* 1–6
wheat × maize crosses 70–75
- Zea mays* 70–75, 109–114, 160–168, 200–205
Zephyranthes 213–217
Zygorhynchus 31–34
